1	How to play draughts?	3
---	-----------------------	---

This is a simple HTML & javascript game website where you can play draughts online against the computer, an old but challenging board game on an 8×8 checkers-board.

## HOW TO PLAY DRAUGHTS?

The rules are simple:

- The pieces must always move one square at a time, on the black squares.
- The moves must be made diagonally only forward, except for a King.
- To take an opponent's piece, you have to jump over it to an empty square.
- Multi-takes are allowed and can be made by the same piece successively.
- When a piece reaches the last opposing line of the board, it becomes King and can take backward.
- To win the game, you have to eat all your opponent's pieces or block them so they can not make any valid move.

You can play draughts online on <https://draughts.github.io/> Have fun and tell us what you think.
